ABOUT

ME

Hey! I'm Doxy PEP (doxycycline post-exposure prophylaxis)

Bio:

Doxy PEP is a post-exposure preventative treatment for syphilis, gonorrhea, and chlamydia.

IMPORTANT

*Doxy PEP must be taken within **72 hours** after condomless sex. **The sooner the better!***

Nickname: Some people call me "the morning after pill" for STIs

NOTE

*Doxy PEP is **not** a replacement for condoms and **does not** prevent HIV, mpox, and other viral infections.*

Should we be friends?

Maybe! You and your health care provider can decide if doxy PEP is right for you.
